DETAILED ACTION

1. Claims 1-20 are pending in the application for examination, wherein claims 1, 10 and 17 being independent.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by McCalmont (US Pat No. 6,215,865).

Regarding claim 1, McCalmont teaches in a telecommunication network, a method for user initiated feature transfer, the method comprising the steps of:

providing a first call agent including a first user (see col. 2, ln 66 – col. 3, ln 59);

providing a second call agent including a second user (see col. 2, ln 66 – col. 3, ln 59);

receiving by a network a request from a first user for a new feature to be transferred from the first user to a second user (see col. 2, ln 66 – col. 3, ln 59);

activating by the network the new feature for the second user through the second call agent (see col. 2, ln 66 – col. 3, ln 59); and

accepting by the second user through the second call agent the new feature (see col. 2, ln 66 – col. 3, ln 59).

Regarding claim 2, McCalmont teaches in the telecommunication network, a method for user initiated feature transfer as claimed in claim 1, wherein there is further included the step of establishing a call between the first and second users with the new feature (see col. 2, ln 66 – col. 3, ln 59).

Regarding claim 3, McCalmont teaches in the telecommunication network, a method for user initiated feature transfer as claimed in claim 1, wherein there is further included the step of generating by the second call agent a billing report (see col. 2, ln 66 – col. 3, ln 59).

Regarding claim 4, McCalmont teaches in the telecommunication network, a method for user initiated feature transfer as claimed in claim 3, wherein there is further included the step of transmitting the billing report by the second call agent to the network (see col. 2, ln 66 – col. 3, ln 59).

Regarding claim 5, McCalmont teaches in the telecommunication network, a method for user initiated feature transfer as claimed in claim 3, wherein there is further included the step of transmitting the billing report by the network to the first call agent (see col. 2, ln 66 – col. 3, ln 59).

Regarding claim 6, McCalmont teaches in the telecommunication network, a method for user initiated feature transfer as claimed in claim 1, wherein the step of receiving by a network a request for a new feature includes the step of receiving by the network a request for transferring a user profile from the first user to the second user (see col. 2, ln 66 – col. 3, ln 59).

Regarding claim 7, McCalmont teaches in the telecommunication network, a method for user initiated feature transfer as claimed in claim 1, wherein there is further included the step of requesting by the first user the new feature for the second user for a predetermined period of time (see col. 2, ln 66 – col. 3, ln 59).

Regarding claim 8, McCalmont teaches in the telecommunication network, a method for user initiated feature transfer as claimed in claim 1, wherein there is further included the step of requesting by the first user the new feature for the second user for a particular communications session or call (see col. 2, ln 66 – col. 3, ln 59).

Regarding claim 9, McCalmont teaches in the telecommunication network, a method for user initiated feature transfer as claimed in claim 1, wherein there is further included the step of replicating a plurality of features of the first user for use by the second user (see col. 2, ln 66 – col. 3, ln 59).

As to claims 10-20, they are rejected for the same reasons set forth to rejecting claims 1- 9 as referred to (see col. 2, ln 66 – col. 3, ln 59).
